DETAILED ACTION

1. Due to the following examiner's amendment, the previous rejections are withdrawn.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Terryence Chapman on 1/11/10.

The application has been amended as follows:

Please **DELETE** all of claim 1, lines 1-21, and **INSERT** -- A rotary rinser comprising:

a stationary member in which a first supply passage and a second supply passage are formed;

a rotary member, located below the stationary member, rotatable about a central vertical axis and disposed to be slidable with respect to the stationary member, the rotary member comprising a first annular projection projecting upward at a first elevation and a second annular projection projecting upward at a second elevation together defining an annular groove between the stationary member and the rotary member to prevent a fluid admixture, and comprising a first discharge passage located within the first annular projection and a second discharge passage located within the second annular projection configured to move into and out of communication with the first and second supply passages, respectively, as the rotary member rotates, and are disposed such that during rotation of the rotary member, when the discharge passages are connected to the supply passages in the stationary member, a fluid is fed into a cleansing nozzle to be injected into a vessel;

wherein the supply passages and the discharge passages come into contact at respective sliding surfaces located at a junction of the stationary member and each one of the annular projections, the sliding surfaces being disposed at different relative elevations and at different radial positions relative to the central axis.—

Please CANCEL claims 4 and 5

In claim 6 line 1, please DELETE "The rotary rinser of claim 5, wherein each discharge passage opens through a sliding surface" and INSERT –The rotary rinser of claim 1, wherein each discharge passage opens through one of the sliding surfaces.—

In Claim 7 line 19, please DELETE "central axis." and INSERT –central axis, such that an annular groove is formed between the first and second flow junction in order to prevent a fluid admixture.—

In Claim 10 line 5 please DELETE "an annular groove" and INSERT –the annular groove--.

3. The following is an examiner's statement of reasons for allowance: The previous presented prior art of Morita does not disclose the sliding surface or junction being located at a different radial position and elevation than another sliding surface or junction thus forming an annular groove that prevents fluid admixture. The annular grooves of Morita are formed at the different elevations but the same radial position, and no groove is present to prevent admixture. The only grooves present allow for fluid to transfer. Newly found art of Gobell teaches a rotary valve that has conduits located at different radial positions but not at different elevations with an annular groove to prevent fluid admixture. Williams and Ethridge teach stacked rotary swivels that allow for different conduits to be located at different radial positions and different elevations, but do not call for or obviate the use of an annular groove to prevent fluid admixture. Additionally, the inlets do not connect as described in the independent claims. None of the above references alone or in combination would point to the instant application's independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JASON HECKERT whose telephone number is (571)272-2702. The examiner can normally be reached on Mon. to Friday, 9:00 - 5:30.
